www.cwru.edu → 129.0.0.1
name of host IP addr.

eg

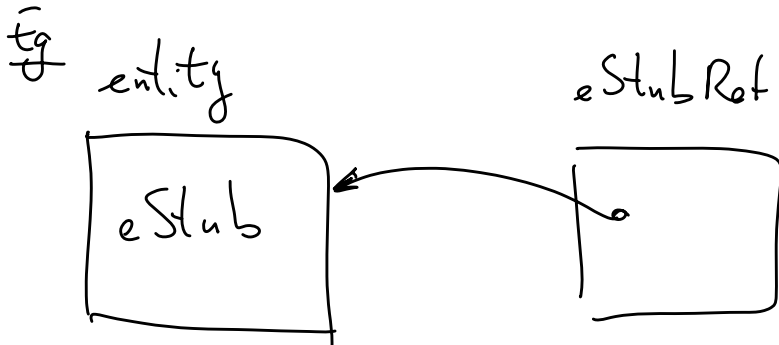

eg

Name refer to entities: a string mapped into an entity

Identifier: a name st.

1. refers ≤ 1 entity
2. each entity is referred to by ≤ 1 identifier
3. an identifier always refer to the same entity (never reused)

Namespaces: universe of names

Eg Namespace = set of all well formed URL

Iterative	Recursive
+ more scalable (caching - local)	+ caching (sharing) + simpler for client
