

EECS 423  
Distributed Systems  
2005 Fall Semester

## Homework 6

Due at the beginning of class, November 29, 2005  
No late papers accepted

A new version of the RFC is posted on the course Web site. It contains amendments to enable file transfers over a request-response protocol. Modify your client and test it by running your test cases. In particular, you should be able to send and receive a file.

Here is a list of things that you need to hand in for this part of the assignment:

- Send to the TA the source code of the e-Parcel client, an executable if available, and instructions to compile and run the the client.
- Send both to the instructor and to the TA by e-mail any changes to the RFC, if any, that you think is needed to implement a correct e-Parcel service.
- Send to the TA an updated test case suite if needed.

The server is not currently available, but it will be well in advance of the assignment due date.
